A Fake Artist Goes to NewYork
5 - 10 players (best 6-7 players)
playing time 20 minutes

Rules
A group of players must work together to find the one **fake artist** among them,
while that player tries to avoid detection.
Each round, players see the round's random keyword and its category, e.g. "Food:
Apple".
But the fake artist *only* sees the category, e.g. "Food: ???".
Players take turns drawing single strokes on a drawing pad. After everyone has
drawn twice, everyone votes on who they think the fake artist is.
The fake artist wins if they don't get the majority vote.
But even if the fake artist gets caught, they get one chance to guess the keyword.
If they guess correctly, *they still win!*

Have a player designated as the game master and have them pick the keyword or
have the keyword generated randomly by an app e.g. https://el-
artista.herokuapp.com/

Having each player use a different color marker can help.
